Warranty

COMECO warrants this product to be free from defects in materials and workmanship for 2 years. If your unit is found to be defective within that time, we will promptly repair or replace it. This warranty does not cover accidental damage, wear or tear, or consequential or incidental loss. This warranty does not cover any defects caused by wrong transportation, storage, installation, or operating (see 'Specifications').

Technical support

In the unlikely event that you encounter a problem with your COMECO device, please call your local dealer or contact directly our support team.

OPERATION MANUAL

TC10A

Please read this Operation Manual before mounting and operating!
Save the Manual for future references!

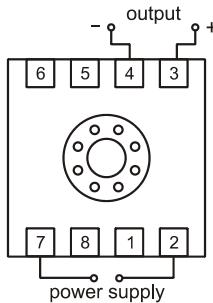

Overview

Often, during automation system building, the controlling device has to be placed somewhere, and the set point has to be adjusted from different, often remote location. This case is particularly common when programmable microprocessor-based controllers are being used, because their set-point adjustment requires time-consuming controller menu scrolling. Therefore, frequent set-point changes burden operator's task. The remote set-point unit TC10A with its easy-to-use 0...100% front dial is a convenient solution. The device generates standard linear voltage or current signals, and is fully compatible with COMECO's controller series RT as well as with other programmable controllers and control systems.

Mounting and Wiring

Wiring

Wire TC10 through the provided socket's terminals as illustrated on the left.

Important notes:

- ◆ Power supply must be turned off during the wiring!
- ◆ Supply voltage polarity does not matter.

Panel mounting

- ◆ Remove the mounting clamp.
- ◆ Place TC10 into a 45 x 45 mm panel cut-out.
- ◆ Put on the clamp and tighten.
- ◆ Wire the socket and plug it into the unit.

Rail mounting

- ◆ Mount the socket on the rail.
- ◆ Connect the cables to the socket.
- ◆ Plug TC10 into the socket.

Specifications

Analog Output	<input type="checkbox"/> 0...20 mA, <input type="checkbox"/> 4...20 mA, <input type="checkbox"/> 0...1 V, <input type="checkbox"/> 0...2 V, <input type="checkbox"/> 0...5 V, <input type="checkbox"/> 0...10 V,
Power Supply	<input type="checkbox"/> <input type="checkbox"/> 230 VAC, <input type="checkbox"/> 115 VAC, <input type="checkbox"/> 24 VAC, <input type="checkbox"/> 12...24 VAC/DC, <input type="checkbox"/> 15...30 VDC, non-isolated, <input type="checkbox"/> 10...18 VAC, non-isolated
Consumption	less than 2 VA
Setting Accuracy	1% from span
Temperature Drift	0.01% from span for 1 °C
Long-term Stability	0.2% per year
Operating Temperature / Humidity	-10...65 °C / 0...85% RH
Protection Class: front / terminals	IP40 / IP20

Operating

- ◆ Using the potentiometer and the dial on the device front panel, adjust the desired set-point value.
- ◆ After power-on, the device generates an output signal, within the output range, proportional to the set point.
- ◆ The 'ACTIVE' LED next to the dial indicates unit state.
